

Pariah — Rules & Data Changelog

Summary of pending working-tree changes across data tables and rulebook pages · generated 2026-09-16

Data Files

`RangedWeaponsArray.js` — Weapon rebalance

- Range bands tightened across most weapons (many collapsed from 4 bands to 3, shorter overall reach); mods reworked toward harsher long-range penalties.
- **Arm Cannon:** damage 10 → 15, tighter close-range mods, lost [QUICK SWAP].
- **Beam Cannon:** ROF 1 → 2, shorter range, gained [BEAM FOCUS].
- **Clay Bazooka:** ROF 2 → 3, tonnage 8 → 3, MCU 35 → 15, gained [BRACE].
- **Vulcan Cannons:** lost its FRO value, range max cut from 36" to 20".
- **Rifle (Marksman) removed** — its scope/grip niche folded into a redefined **Rifle (Kinetic)** (damage 8 → 12, gained [PRECISE], [BURST(2)]).

`UpgradeArray.js` — Catalog expansion & rebalance

- **Added:** [AP(x)] (new), Lightweight Barrel, three [SCOPE] variants (Pinpoint / Thermal / Reflex, replacing the old single [SCOPE] upgrade), [STABLE], and a weapon-slot Recoil Counterbalance.
- **Removed:** "Upgrade:Brutal" — superseded by the new [AP(x)].
- **Reworked:** [CYCLIC] (now usable on Sniper Rifles, capped at 1 per sniper, MCU 25 → 35); Heavy Barrel (bigger range swing, tonnage 2 → 4); Munitions Rack (now targets one weapon instead of two, tonnage 2 → 1, qty 2 → 4).

`SupportEquipmentArray.js`

- Removed the standalone "Recoil Counterbalance" support item — it now exists only as the weapon-upgrade version above.

KeywordArray.js

- [BURST(X)] reworded — now sets ROF to X and rerolls all hits (previously rerolled X dice at -2 ROF).
- [SCOPE] simplified — dropped the "reroll one hit location die" clause (that behavior moved to the new Pinpoint upgrade variant).
- Added [STABLE] (reduces negative GS movement penalties by 1).

⚠ **Needs attention:** [SILVER BULLET] now appears twice in the array — an accidental duplicate left over from reordering [RELOAD] above it. One copy should be deleted.

FactionsArray.js

- Fixed a stray unclosed-bracket typo ([MOUNTABLE]).
- "Impromptu Mechanics" (EF) now grants both [MECHANIC PRO] and [FRAMEWORK] traits (was purchase-only access to one).
- "Avalanche of Aggression" now only triggers on a unit's *first* ranged attack taken per round.

PilotTraitArray.js — Pricing & effect pass

- Cost reductions (mostly -1): CQ Specialist, Duelist, Evasive, Guns Blazing, Juke, Leapfrog, Lucky Cat, Nemesis, Oldtype Ace, Reactive, Recon Operative, Theme Song. Battle Group Commander 4 → 3.
- New trait: **Framework Specialist (EFGF)** — weapon gains [INBUILT].
- Effect rewrites: Aggressive/Bandit gained defensive-movement clauses; Buzz Saw can now target Obscuring Cover directly; Child Soldier/Rookie changed from "stats default to 0" to "decrease stats by one"; Mechanic Pro (EFGF) lost its free-[INBUILT] clause (now covered by Framework Specialist); Opportunistic grants [LETHAL] instead of a reroll; Prowler's immunity now conditional on moving >5".

ForceListData.js / ZeonPresetsArray.js

- Renamed "MG (ZEON)" → "Machine Gun" (and "(Beam) Machine Gun (ZEON)" → "(Beam) Machine Gun") everywhere, folding the Zeon-specific name into the shared weapon entry.

EFPresetsArray.js / ReZeonPresetsArray.js

- Presets brought in line with the rebalance: Head Vulcans gained [SCOPE] across most builds; [MOUNTABLE] Beam Cannons gained [BEAM FOCUS]; Vulcan Cannon / Clay Bazooka / Rifle (Kinetic) entries updated to new base stats.
- Assorted blank FRO/tonnage/notes fields filled in; a stray "[SCOPE" (missing bracket) typo fixed in ReZeonPresetsArray.

Rules Text

Chapter 2 → Equipping Weapons

Added a rule that two weapons can share one Pilot Sheet slot if they occupy the same hit location (example: two torso-mounted Kinetic Gatlings clubbed into one slot).

Chapter 2 → Upgrades

Added a rule that a Weapon-location upgrade's tonnage cost adds to the weapon itself and can bump its weight class (LIGHT → MEDIUM → HEAVY).

This matches the tonnage roll-up now wired into the Pilot Sheet's weapon-upgrade feature.

Chapter 3 → Attack Sequence

Step 1's LOS check now also allows checking LOS to [HARD COVER], not just the enemy MSU.

Chapter 3 → Movement

Evasion Tier Table overhauled — bands tightened to 0-3" / 4-13" / 13"+ (from 0-8" / 9-20" / 21"+); middle tier now carries a -1 GS penalty (was N/A); top tier now -2 GS (was -1). Wording changed "evasion dice" → "evasion mods". [ADVANCE] no longer costs 1 FRO.

Chapter 3 → Phases

Initiative is no longer its own phase — it's now a "Step 1.5" bidding mechanic inside the Status Phase (spend FRO added to Piloting, hidden simultaneous reveal), replacing the flat 2d6+PS roll. Attack Phase now resolves **highest**-initiative-first (was lowest-first).

Chapter 3 → Reactions

[REACTIVE ATTACK] trigger reworded to "enemy moves >3" and ends within LOS" — drops [BOOST] as a qualifying trigger and removes the "before or after" option (must react before the enemy resolves).

Chapter 3 → States

[STEALTH] reveal now requires the discovering enemy to roll 5+ (was automatic); a revealed unit can't re-enter [STEALTH] until it breaks LOS with all enemies again.
